# SUBWAY RIDE

The graph represents a subway traveling across town. The horizontal axis represents time and the vertical axis represents distance traveled.

- a) **Label the axes.** Think about an appropriate unit of time for the x-axis (days? months? hours? minutes? seconds?). Think about an appropriate unit of measure for distance on the y-axis (feet? inches? miles?). The choices should help you with your story.
  
- b) **Write a story** on a separate sheet of lined paper. Use the space below for pre-writing. Think about what is happening with the train along the way. Include an estimate of the total time it took to make the trip. Explain how you made this estimate.
